

DIRECT TO GARMENT

Direct-to-garment printing uses water-based inks in a large inkjet printer system capable of printing directly on apparel and other fabrics. The inks are absorbed into the fibers of the fabrics (100% cotton has the best results). This allows for a high resolution image to be reproduced in full color, which is a benefit over screenprinting.

High Cotton Content apparel and fabrics are recommended.

Images are reproduced in high resolution, vibrant full color in the same quality that an inkjet printer can print on paper.

Perfect solution for those One-Of-A Kind designs. You can provide your custom artwork or make something original using one of our design kiosks.

Personalize it. Make the shirt your own with custom names, numbers and graphics.

No minimum orders required. Print one just for fun.

Digital designs can be resized for printing. You can adjust the size and use the same design for baby and Dad.

The DTG printer accepts a larger variety of files. Artwork can be vector or pixel-based.

The process is quick and easy.

For light colors on dark apparel, the shirts can be pretreated for even better saturation.
